

AD Bridge 3.3 System Requirements

March 2022

AD Bridge 3.3 includes new features that will enable you to bridge Linux distributions with Windows Active Directory (AD) to manage Linux clients from an AD domain using Group Policy objects.

- ◆ [“System Requirements” on page 1](#)
- ◆ [“Legal Notice” on page 5](#)

Micro Focus recommends the fully tested and certified platforms described in this page. However, customers running on other platforms or with untested configurations will be supported until the point Micro Focus determines that the root cause is the uncertified platform or configuration. Issues that can be reproduced on the certified platforms will be prioritized and fixed according to standard defect handling policies. For more information about support policies, see [Support Policies](#).

Additional Microsoft Software Requirements

Component	Operating Systems
Active Directory	<ul style="list-style-type: none">◆ Windows Server 2019 64-bit◆ Windows Server 2016◆ Windows Server 2012 R2◆ Windows Server 2012

Hardware Requirements

This section provides sizing information for our base resource recommendation. Your results may vary based on the hardware available, the specific environment, the specific type of data processed, and other factors. It is likely that larger, more powerful hardware configurations exist that can handle a greater load. If you have questions, please consult with Consulting Services.

Executed in an environment with approximately one million Active Directory objects:

Component	CPU	Memory	Storage
Microsoft Windows Server	4 CPU (x64)/cores 2.0 GHz	16 GB	100 GB
Linux Agent	2 CPU (x64) cores	4 GB	30 GB

Application Integrations

Component	Integrated Systems
Linux Agent	Linux Distributions
GPEdit Extension (snap-in)	Windows Server, Group Policy Management Console (GPMC)
Browsers	Chrome, Firefox, and Microsoft Edge

For server versions, see [Software Requirements](#).

Supported AD Bridge Agent Operating Systems

Agent Type	Operating System
