Fortify Software Security Center

Fixes

The patch includes bug fixes and quality enhancements that improve application stability. This patch fixes the following issues:

- Persisted LDAP cache does not load when LDAP groups containing invalid member entries are registered in SSC.
- Occasionally, when changing application versions, the wrong application version is displayed on the Audit page.
- Broken deep links to the Audit and Overview pages.
- To reduce performance impact of LDAP cache refreshes when large LDAP groups are registered with SSC, you can increase the interval from the 1 hour default. Set the new application property `ldap.cache.refresh.interval.hours` to a value between 1-12.

Documentation

- There are no documentation updates required for this patch. Use the latest versions of the documentation created for 22.2.0.
