a. All minor versions of the platforms are supported from the platform stated onwards, for example, if we state we support RedHat Enterprise Linux 6.x then we will support all minor versions e.g. 6.1, 6.2 through to the current minor 6.x release. When there is a new major version change, for example 7.0, then this table will be updated accordingly with the major version numbers.

b. Orbix 6.3.12 introduces support for a new Linux build of the product, which has been built with the GCC 8 compiler. This is supported on RedHat Enterprise Linux 8.x and SUSE Linux Enterprise Server 15.x platforms, this support is in addition to the existing support of these platforms with the already existing Linux offering.

c. The libnsl package may need to be installed if it is not already installed.

d. Both Oracle Solaris Studio 12.4 and Oracle Solaris Studio 12.5 compilers are not supported with the latest versions of CORBA products. Two compiler issues have been uncovered during testing and raised against Oracle. Oracle Bug 21681651 relates to an inconsistent behavior in pushing function parameters on the stack between Studio 12.4 and earlier compiler versions. Oracle Bug 22179603, relates to an inconsistent behavior in symbol name mangling between Studio 12.4 and earlier compiler versions.

Micro Focus has confirmed that Bug 21681651 has been addressed in Oracle Sun Studio 12 Update 5. Oracle Bug 22179603 has been resolved in Oracle Studio 12 Update 6.

e. That the Oracle and OpenJDK 8 JDKs for Solaris (SPARC and Intel x86-64) platform supports only a 64-bit JRE, and so cannot compile or run 32-bit applications.

f. For all 32 bit platforms - Orbix supports WoW64 (Windows 32-bit On Windows 64-bit), thereby enabling 32-bit builds of Orbix to be deployed on Windows 64-bit. WoW64 is a subsystem of the Windows operating system that is capable of running 32-bit applications on 64-bit versions of Windows. The Bit mode of the compiler and the JDK needs to match the Bit mode for the Orbix product. For example an Orbix 32 Bit installation requires a 32 Bit JDK and a 32 Bit development environment irrespective of whether this is deployed on WoW64.

Note: Orbix 6.3.10 supports Microsoft Visual Studio 2015 version 14.0.25431.01 Update 3 or later versions. Support is not provided for earlier versions than Microsoft Visual Studio 2015 version 14.0.25431.01 Update 3 due to compiler issues discovered during testing.

Note: A compiler and operating system point release (i.e. not a major release) will be supported as long as we have tested the prior major release.
